SUMMARY

I am a second-year Information Technology student passionate about web development, seeking an internship opportunity to apply my technical skills and gain hands-on experience as a Front-End Developer. I aim to strengthen my technical and teamwork skills toward becoming a professional Software Engineer.

EDUCATION

Posts and Telecommunications Institute of Technology

Sep 2024 - Present

Engineering of Information Technology | GPA: 3.10 / 4.0

Ho Chi Minh City, Vietnam

- Academic Encouragement Scholarship (2024-2025)

SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS

Frontend: Next.js, React (Vite), Shadcn UI, TailwindCSS, Tanstack Query, Zustand

Backend (Exposure): Node.js, Express.js, RESTful API Design, JWT, OAuth

Database: MySQL, MongoDB

Tools: Git, Docker, Postman, Figma

Languages: English (Intermediate)

Deploy: Vercel, Render, Aiven

PROJECTS

Cyper - Ecommerce Platform | Frontend Developer | Team Size: 1

- Tech Stack: **React.js, Next.js, TypeScript, Node.js, Express.js, MySQL, TanStack Query, Zustand, TailwindCSS.**
- **Github:** <https://github.com/MTIT396/Cyper-Ecommerce-Client>
- **Live Demo:** <https://www.cyper.store>
- Built scalable frontend architecture with reusable service layers, custom hooks, Axios interceptors, and strict TypeScript typing to manage complex CRUD workflows for cart, wishlist, checkout, and order systems.
- Designed advanced e-commerce filtering system with URL search params synchronization, removable filter badges, multi/single-select filters, and infinite loading for production-like product browsing experience.
- Integrated MoMo Sandbox payment gateway with simulated checkout flow, callback/redirect handling, payment status polling, and real-time order status synchronization between frontend and backend.
- Built secure JWT authentication flow with Google OAuth integration, protected routes, centralized auth state management, and refresh token handling.
- Optimized frontend performance through lazy loading, image optimization, loading skeletons, and render optimization techniques to improve perceived responsiveness.
- Developed scalable media upload workflow with Cloudinary integration, upload state management, image replacement handling, and cleanup strategies for product assets.
